

Application usage per server and user Report

This report is available by clicking on **Servers > Reports** tile, then on the **Application usage per server and user** link from the left menu

The screenshot shows the TSplus ServerMonitoring web interface. The top navigation bar includes tiles for Home, Servers, Reports (highlighted with a red box), Websites, Alerts, and Settings. The left sidebar menu has categories like Performances, Availability, User Presence, Applications, and Custom. Under the Applications category, 'Application usage per user && server' is highlighted with a red box. The main content area displays the 'Application Usage per server and user' report. It includes filters for Start date (3/1/2022), End date (3/16/2022), and Servers (W11P-STD, WS2016-STD, WS2019-STD, WS2022-STD, Server Monitoring (WIN-LBAGL4US301)). The report table shows data for the process 'AdminTool' used by user 'Caleb' on server 'Server Monitoring (WIN-LBAGL4US301)', with a value of 279. The total for this server is also 279.

Process	Server Monitoring (WIN-LBAGL4US301)	Total Server Monitoring (WIN-LBAGL4US301)
AdminTool	279	279
alternateshell.exe		
Application Frame Host		

The **Application usage per server and user Report** displays the application usage per user for the specified server(s) and period of time.

The data can be filtered by server name and date range.
