

Get Started with ServerGenius

Step 1: Installing ServerGenius on your computer

Installing ServerGenius is an easy process.

Just download it from [our web site](#), run the Setup-ServerGenius.exe and follow the steps detailed [here](#).

Files are decompressed and copied into:

- "C:\Program Files\RDS-Tools\ServerGenius" folder (32 bit systems)
- "C:\Program Files (x86)\RDS-Tools\ServerGenius" folder (64 bit systems).

The trial version is a full featured version limited to 2 weeks.

After the installation, there will be a new icon on your Desktop:

Step 2: Checking your Installation

On your server, start an Internet browser (such as Chrome, Firefox or Internet Explorer).

Browse to <http://localhost:7777> by default, or change the "7777" part with the port you have chosen during the installation.

If everything has been installed and configured properly, then you should have a web page such as the one below:

The image is a screenshot of a web browser displaying the ServerGenius login page. The browser's address bar shows "ServerGenius" and "RDS Servers". The page has a dark header with "ServerGenius" and "Support" links. The main content area is white and contains the text "Login" and "Restricted access, please login". Below this, there are two input fields: "Username" with the value "admin" and "Password" with masked characters "*****". A blue "Login" button is positioned below the password field.

If this page is not displayed, please contact our [Support](#) team.

By default, the login is **admin**, password **admin** which you can then change by modifying the Settings on the Administration tab.

Step 3: Connecting Remotely to your Server's Reporting & Monitoring web interface

You can now connect to ServerGenius web interface from virtually any device (your computer or laptop, your tablet, your mobile phone...).

All you have to do is to browse to `http://yourserver:7777` (using your server's domain name or public IP address).
