Terminal Service Plus Installation

Run Terminal Service Plus Setup program and then follow the installation steps.

You can then select two custom options by ticking the corresponding boxes :

- Use custom proxy settings.
- Only download setup, which does not install TSplus.

Click on next.

Web servers are listening on ports 80 and 443 by default. We recommend you to accept our TSplus default installation settings. According to our experience, most of the production issues are due to Windows security features.

You can still modify these ports if you wish during installation or at any time on the Built-in Web Server Management of

the AdminTool. Just make sure that the defined ports are available and that Java is installed on the server.
