

Fast and easy File Transfer between the User and the Server

Overview

TSplus includes a unique method of transferring files:

- from the local user workstation => to the user Remote Desktop
- from the TSplus server => to the local user Desktop

Because the file transfers are based on a Virtual Channel, it is a lot faster than a file copy, and it can be done **even when the local user disk drives are not mapped**.

FileTransfer program and Generated Clients

The File Transfer program is located in your TSplus program folder, under the name "FileTransfer.exe" into the following path: "UserDesktop\files"

Transferring files

Transferring files is very easy.

First, launch the File Transfer (for instance by using TSplus Floating Panel):

Then navigate to your file using the folders tree:

- server's folders and files are on the **left part of the window (server side)**
- local workstation's folders and files are on the **right part of the window (client side)**

Finally, right click on the file that you want to transfer to the other side, and click on "Send to server" (or "Send to client"):

File Transfer works from the local workstation to the server, as well as the other way around (from the server to the local workstation).

Note: When using the file transfer utility from an HTML5 session, you will be able to transfer your files from server to client only. Please prefer the [HTML5 Top Menu method](#), where you can upload files to the server, download to client and manage your file transfer listing.
